DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on April 7, 2006 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-27 are rejected under 35 U.S.C. 102(e) as being anticipated by Nishi et al.

(Nishi) (2004/0233407).

Nishi discloses a projection exposure apparatus, a method of projection exposure, and a method of manufacturing an exposed member comprising an illumination system (40), a projection system (PL), an exposure stage (WS) which moves the member (W), a mask stage (RST) which moves the mask (R), and a controller (38). Regarding the control of the movement of the stages, while Nishi does not expressly teach moving the member and the mask by a

movement amount equal to n times a pitch of the columns of the exposure pattern, the sequential exposure of different sections of wafers with an exposure pattern to simplify the exposure are a technique inherent in the teaching (para 0415-0451). Because reduction projection is used in Nishi, the mask and the member would be moved a small amount, n times a pitch of the columns of exposure pattern where n is a natural number smaller than the number of columns, in order to expose the next shot area of the member. Nishi also discloses a shutter (42) and a fixed shielding piece and a movable shielding piece (64).

Remarks

The claims are rejected based on references cited on the newly submitted IDS.
